PRESS RELEASE – FOR IMMEDIATE RELEASE

TASKA Prosthetics To Establish Direct Operations In The United States From April 2027

23 October 2026

TASKA Prosthetics today announced that its U.S. distribution agreement with Fillauer will conclude at the end of its current term on 31 March 2027. From 1 April 2027, TASKA will operate directly in the United States from a new base in Salt Lake City, Utah.

The decision marks the next stage in TASKA's growth. Operating directly in the world's largest market for upper-limb prosthetics will bring TASKA closer to clinicians, users and customers, from initial fitting through to servicing and ongoing support. It will also help TASKA learn faster from the U.S. market and apply new technology and clinical insight more directly.

The transition follows many years of collaboration between TASKA, Fillauer and Motion Control. Together, the organizations helped establish TASKA in the United States and introduce durable, waterproof multi-articulating prosthetic technology to clinicians and users across the country.

“We are very grateful to Fillauer and Motion Control as well as Hanger group for the role they have played in establishing TASKA in the United States,” said Ben Travers, CEO of TASKA Prosthetics. “Moving to a direct model is the next stage of TASKA's development. It brings us closer to clinicians and users in the world's most important prosthetics market, and offers a stronger base for service, learning and future innovation.”

From 1 April 2027, TASKA's Salt Lake City base will become the company's hub for sales, support, clinical engagement, service and training across the Americas, with future innovation activity to follow as the direct model develops.

TASKA is part of Eqwal Group's Products and Components division, which brings together specialist upper-limb, orthotic and prosthetic component manufacturers from across the Eqwal network, including Steeper Group. TASKA and Steeper already work together on integrated upper-limb solutions, pairing the TASKA hand with Steeper's Espire™ elbow, and will continue building that relationship as part of a broader upper-limb portfolio.

TASKA and Fillauer are committed to a carefully managed transition that protects continuity of care. Existing devices, warranties, servicing and clinical support will continue without interruption, and customers do not need to take any action at this stage. Through March 31st 2027 nothing changes for our stakeholders, its business as usual. TASKA will work closely with Fillauer, Motion Control, clinicians and users to ensure an orderly handover from April 1st that keeps disruption to a minimum, and will provide further updates well in advance.

“Our first responsibility is to the people using our hands every day,” said Travers. “Setting up service capability in Salt Lake City is about protecting continuity of repairs, support and clinical care. Users and clinicians should not experience a gap in service through this transition.”

About TASKA Prosthetics

TASKA Prosthetics develops advanced upper-limb prosthetic technology designed to help people regain independence and confidence in everyday life. Headquartered in New Zealand, TASKA is known for combining durability, functionality and user-centered design to create prosthetic solutions trusted by clinicians and users around the world. TASKA is part of Eqwal Group's Products division, alongside fellow upper-limb specialist Steeper Group, within a global network of patient care, digital and product innovation dedicated to improving mobility and quality of life.
